

Although we are just before the publication of a first test version of JoomGallery for Joomla! 1.7 we want to provide another bugfix release of JoomGallery for Joomla! 1.5 today.

Some of the fixed bugs only occur when using the content plugin 'JoomPlu', others only for certain gallery configurations. We don't provide a detailed list of the fixed bugs here this time. Those interested in more details should have a look at the file 'CHANGELOG.php' in the 'admin' folder of the installation Zip.

Of course we recommend upgrading to the new version. The upgrade is either possible via an Autoupdate in the Admin panel of the gallery or you can download the corresponding Zips from our server and install them with the help of the extension manager of Joomla!. Before updating - as always recommended at this point - please backup your file system and the database content.

### **Downloads**

[JoomGallery 1.5.7.4](#)
